LINAK[®] information about Per- and polyfluoroalkyl substances (PFAS)

To LINAK customers

LINAK is aware that PFAS are of global concern due to their persistence in the environment and effects on human health. Although the use of certain PFAS is restricted through national legislation, restrictions do not apply to all PFAS. Furthermore, we are aware that the manufacturing and usage of PFAS are in the process of being restricted under REACH <https://echa.europa.eu/da/-/echa-publishes-pfas-restriction-proposal>.

PFAS exists in many different types of components, and for various applications. We are aware of component types, such as greases, O-rings, coatings and plastics where PFAS is present in some LINAK products. This is mainly in the form of PTFE/Teflon. LINAK are currently in the process of documenting the full extent of PFAS use, and are expected to have finished the analysis by Q2-2024. Furthermore, we are continuously monitoring the REACH restriction proposal, to make sure that our products will continue to be in compliance with REACH.

If you have any questions, feel free to contact chemicalcompliance@linak.com.
