LINAK[®] 
WE IMPROVE YOUR LIFE

Design freedom

The office environment is always changing

Designers are forced to think not only about their current project requests, but also how those designs can be fluid enough to last through a fast paced world that sees new trends and topical focuses every year. LINAK®, a global leader in lifting column solutions,

partners with the best office furniture manufacturers with the goal to provide designers the design freedom needed to meet this demand. Helping designers merge the worlds of functionality and aesthetics while improving the lives of their customers.

Design for flexibility

How to maximize the space

- Add movement to furniture where people spend the most time
- Use benching systems

Movement can be added anywhere

Movement can be anywhere you are in the office space. From one leg stands to multi-leg conference room tables, the possibilities of how you can bring movement into your office space designs are endless. One thing to think about is where will people be spending their time. They likely will not be spend all their time at their desk. Between meetings,

collaborations and socializing in the workspace, there are many areas where motion can be designed into furniture to promote flexibility in the environment.

Get more from less using bench systems

Bench systems connect what would have been two or more free-standing desks, and reduce the space consumed by cable management, individual computer hubs, dividers, and other desk accessories. LINAK offers bracket options to help our customers design optimal benching solutions.

Making assembly easy

- Use Kick & Click™ top frames with no tools or screws to achieve easy and fast installation
- All DESKLINE® products are Plug & Play™ and can be switched out seamlessly

As the office environment changes rapidly, it is important to have desks and designs that can quickly go up, and come down. With LINAK, the Kick & Click™ top frames can be easily mounted with no tools and no screws, and just as easily

disassembled. In addition to this, we provide solutions where all components work together. They are simply Plug & Play™, making a move to the next floor or space renovation a painless process.

Keeping a clean look

- Design with top frames that include cable management
- Use lifting columns with invisible glide pads

Dislike the look of cables hanging from your designs? With LINAK® top frames, such as Kick & Click™, and with DF2, cables are easily hidden away without using tools or clips. Simply hide the cables underneath the rails during installation.

To keep your designs even cleaner, we offer lifting columns with invisible glide pads. Making every leg a smooth design piece for the desk.

Design for wellness

Wellness is important for a lot of reasons. There are benefits for both the employee and the employer when height adjustable desks are used in the workplace.

Boost overall productivity and performance with co-active designs

Studies have shown when employees use sit-stand desks they have reduced sick days, are more focused and productive, and are less stressed.

Ensure users get the health benefits of their sit-stand desks

- Incorporate intuitive desk panels with reminder functions like the DPG1C
- Set goals for preferred sitting and standing intervals

Truly digital and with a clever design, LINAK® launched the Red Dot design award winning Desk Panels DPG series. Designed to shape behavior, the Desk Panel DPG helps motivate users get the most out of their sit-stand desks. Apart from being intuitive to use, it offers four memory positions with a light reminder function. It is also compatible with the LINAK Desk Control™ App which allows additional functionality, including:

- Automatic drive
- Goal setting
- Calorie tracking
- Data on desk activity

LINAK Desk
Control™ App

Design for the future

A desk can be a(n):

- Personal desk
- Social center
- Co-working space
- Technology hub
- Conference table
- Active station

Whatever your design ideas are, LINA can help them become a reality.

Desks are already more than just desks. With the help of technology, desks have become the hubs for better experiences that allow us to navigate place, time, resources and commitments seamlessly. At the same time, providing companies with data that helps them make quantifiable choices to improve the workplace.

Integrate advanced technology

DPG Desk Panels are a platform of endless functionality possibilities. Via the integrated Bluetooth® wireless technology, you can connect the Desk Panel with the Desk Control™ App and operate your desk. The app is available for Android and iOS mobile devices. The combination of the intuitive tilt panel, mobile device control, and customizable intervals for reminders makes it a must have for modern office designs.

Focus on the environment

Reduce the energy used

The environment is increasingly on people's minds. If you imagine the thousands of people who may work in large facilities, you get an idea of the amount of energy being used just to power the workspaces. To help companies reduce energy use and support reduced CO₂ emissions, LINA uses ZERO™ technology to lower standby power consumption to just 0.1 W. All DESKLINE® control boxes have low standby power as a standard. This can have a positive cumulative effect on overall energy savings for companies and for the environment.

Know what is in the materials

Keep an eye out for PVC. PVC is a type of plastic often used in cables and as coating in electric components. For it to be soft enough plasticizers are added – the most widely used being phthalates. Phthalates are suspected of disrupting hormones, and being related to several chronic diseases, as well as causing birth defects. PVC needs to be recycled separately, which can be costly and when incinerated, it releases dioxins. Look for suppliers with responsible production practices. For health reasons and for the sake of the environment, LINAК was the first in the industry to move to PVC-Free™ as standard.

Provide unparalleled service and support

The best LINAK® product is our people. With every LINAK system, customers get the best industry service and support available. From engineering and customer service to logistics and technical support, LINAK ensures that our customers get quality products and solutions when they need them.

How to integrate movement with great design

More and more architects and designers are taking on the challenge to integrate adjustment when creating furniture for modern offices. One of them is Tine Mouritsen. As one of Denmark's leading interior designers, she has utilized low-noise electric lifting columns from LINAK to make well-functioning height-adjustable office desks without compromising her unique and elegant design.

"We have a lot of lifestyle health problems. The challenge of that is attractive to me, as a designer," Mouritsen explains as reason for her working movement into her concepts. To her there is no conflict between functionality and design.

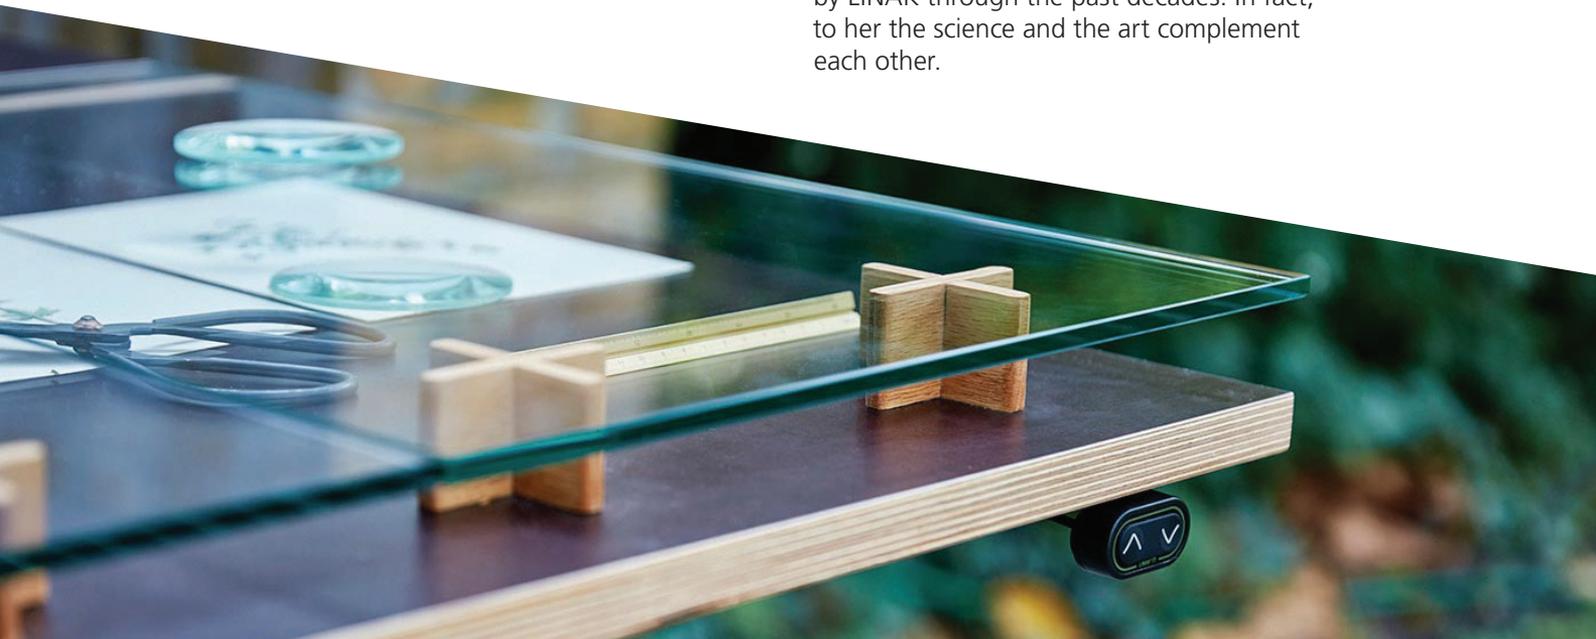

"It really is possible to design beautiful furniture that moves – I've done it!"

— Tine Mouritsen, Interior Designer

"The design process gets easier when you start out with the mechanism and the knowledge, LINAK has. Then it isn't just something you add when you have finished designing the product. It is something that's kind of integrated. You don't see it as much".

Tine Mouritsen has taken advantage of the extensive product range as well as the abundance of technology know-how achieved by LINAK through the past decades. In fact, to her the science and the art complement each other.
