Preface

Dear User,

We are delighted that you have chosen a product from LINAK®. LINAK systems are high-tech products based on many years of experience in the manufacture and development of actuators, electric control boxes, controls, and chargers.

This user manual does not address the end-user, but is intended as a source of information for the manufacturer of the equipment or system only, and it will tell you how to install, use and maintain your LINAK electronics. It is the responsibility of the manufacturer of the end-use product to provide a User Manual where relevant safety information from this manual is passed on to the end-user.

We are sure that your LINAK product/system will give you many years of problem-free operation. Before our products leave the factory they undergo full function and quality testing. Should you nevertheless experience problems with your LINAK product/system, you are always welcome to contact your local dealer. LINAK subsidiaries and some distributors situated all over the world have authorised service centres, which are always ready to help you.

LINAK provides a warranty on all its products. This warranty, however, is subject to correct use in accordance with the specifications, maintenance being done correctly and any repairs being carried out at a service centre, which is authorised to repair LINAK products. Changes in installation and use of LINAK products/systems can affect their operation and durability. The products are not to be opened by unauthorised personnel.

The User Manual has been written based on our present technical knowledge. We are constantly working on updating the information and we therefore reserve the right to carry out technical modifications.

LINAK A/S
LINAK application policy

The purpose of the application policy is to define areas of responsibilities in relation to applying a LINAK product defined as hardware, software, technical advice, etc. related to an existing or a new customer application.

LINAK products as defined above are applicable for a wide range of applications within Medical, Furniture, Desk, and Industry areas. Yet, LINAK cannot know all the conditions under which LINAK products will be installed, used, and operated, as each individual application is unique.

The suitability and functionality of the LINAK product and its performance under varying conditions (application, vibration, load, humidity, temperature, frequency, etc.) can only be verified by testing, and shall ultimately be the responsibility of the LINAK customer using any LINAK product.

LINAK shall be responsible solely that LINAK products comply with the specifications set out by LINAK and it shall be the responsibility of the LINAK customer to ensure that the specific LINAK product can be used for the application in question.
Chapter 1

Safety instructions

Please read this safety information carefully:

Be aware of the following three symbols throughout the user manual:

⚠️ Warning!
Failing to follow these instructions can cause accidents resulting in serious personal injury.

👉 Recommendations
Failing to follow these instructions can result in the actuator suffering damage or being ruined.

ℹ️ Additional information
Usage tips or additional information that is important in connection with the use of the actuator.

Furthermore, ensure that all staff who are to connect, mount, or use the actuator are in possession of the necessary information and that they have access to this user manual.

Persons who do not have the necessary experience or knowledge of the product/products must not use the product/products. Besides, persons with reduced physical or mental abilities must not use the product/products, unless they are under surveillance or they have been thoroughly instructed in the use of the apparatus by a person who is responsible for the safety of these persons.

Moreover, children must be under surveillance to ensure that they do not play with the product.

Before you start mounting/dismounting, ensure that the following points are observed:

- The actuator is not in operation.
- The actuator is free from loads that could be released during this work.

Before you put the actuator into operation, check the following:

- The actuator is correctly mounted as indicated in the relevant user instructions.
- The equipment can be freely moved over the actuator’s whole working area.
- The actuator is connected to a mains electricity supply/transformer with the correct voltage and which is dimensioned and adapted to the actuator in question.
- Ensure that the voltage applied matches to the voltage specified on the actuator label.
- Ensure that the connection bolts can withstand the wear.
- Ensure that the connection bolts are secured safely.
During operation, please be aware of the following:

- Listen for unusual sounds and watch out for uneven running. Stop the actuator immediately if anything unusual is observed.
- Do not sideload the actuator.
- Only use the actuator within the specified working limits.
- Do not step or kick on the actuator.

When the equipment is not in use:

- Switch off the mains supply in order to prevent unintentional operation.
- Check regularly for extraordinary wear.

Classification

The equipment is not suitable for use in the presence of a flammable anaesthetic mixture with air or with oxygen or nitrous oxide.

⚠️ Warnings

- Do not sideload the actuator.
- When mounting the LA35 in the application ensure that the bolts can withstand the wear and that they are secured safely.
- If irregularities are observed, the actuator must be replaced.

💡 Recommendations

- Do not place load on the actuator housing and do prevent impact or blows, or any other form of stress to the housing.
- Ensure that the cable cover is mounted correctly. Use 3.5Nm torque.
- Ensure that the duty cycle and the usage temperatures for LA35 actuators are respected.
- Ensure that the cable cannot be squeezed, pulled or subjected to any other stress.
- Furthermore, it will be good practice to ensure that the actuator is fully retracted in the “normal” position. The reason is that there will be a vacuum inside the actuator if it is extended which over time can lead to water entering the actuator.
- If the actuator (without integrated controller) is mounted in an application where a mechanical stop prevents the endstop switches in the actuator from being activated, the actuator must be equipped with an electrical safety device (current monitoring) or external limit switch.
Chapter 2

Mounting guidelines

LINAK® linear actuators are quickly and easily mounted by slipping pins through the holes on each end of the units and into brackets on the machine frame and the load.

The mounting pins must be parallel to each other as shown in Figure 1. Pins, which are not parallel to each other, may cause the actuator to bend and be damaged.

The load should act along the stroke axis of the actuator as off-centre loads may cause bending and lead to premature failure. See Figure 2.

Make sure the mounting pins are supported in both ends. Failure to do so could shorten the life of the actuator. Also, avoid applying a skew load on the actuator.

The actuator can rotate around the pivot point in the front and rear end. If this is the case it is of high importance that the actuator is able to move freely over the full stroke length, both during the development and daily operation. Please pay special attention to the area around the housing where parts can be trapped and cause damage to the application and actuator.

In applications with high dynamic forces LINAK recommends not to use the fully extended or retracted position over longer time, as this can damage the endstop system permanently.

Please be aware that if the LA35 is used for solar applications the actuator must be mounted with the motor housing turned upwards and the wires pointing downwards.
Mounting guidelines

- The mounting pins must have the correct dimension.
- The bolts and nuts must be made of a high quality steel grade (e.g. 10.8). No thread on the bolt inside the back fixture or the piston rod eye.
- Bolts and nuts must be protected so there is no risk for them to fall out.
- Do not use a torque that is too high when mounting the bolts for the back fixture or the piston rod eye. This will stress the fixtures.

Please note:
The piston rod eye is only allowed to turn 0-90 degrees.

Instruction concerning the turning of the piston rod eye and inner tube:
- When mounting and taking into use, it is not permitted to make excessive turns of the piston rod eye. In cases where the eye is not positioned correctly, it is permitted to first screw the eye down to its bottom position, at a maximum torque of 2Nm (1), and thereafter a maximum 90 degrees turn outwards again (2).
- As the piston rod eye can turn freely, it is important to ensure that the eye cannot rotate if the actuator is used in a pull application. If this happens, the actuator will be pulled apart and destroyed.

Warning!
If the actuator is used for pull in an application where personal injury can occur, the following is valid:
It is the application manufacturer’s responsibility to incorporate a suitable safety arrangement, which will prevent personal injury from occurring, if the actuator should fail.

Warning!
LINAK’s actuators are not designed for use within the following fields:
- Offshore installations
- Explosive environments
- Aeroplanes and other aircraft
- Nuclear power generation
Mounting of cables

When changing the cables on a LINAK actuator, it is important that this is done carefully, in order to protect the plugs and pins. Before the new cable is mounted, we recommend that the socket is greased with vaseline, to keep the high IP protection and ensure an easy mounting. Please be sure that the plug is in the right location and fully pressed in before the cable lid is mounted.

Please note that if the cables are mounted and dismounted more than 3 times the plugs can be damaged. Therefore, we recommend that such cables are discarded and replaced. Also note that the cables should not be used for carrying the actuator.

We recommend to take some precaution and design the wire connection in a way, where the cable end is kept inside a closed, protected area to guarantee the high IP protection.

---

1. Unscrew the cover and remove the two cables and/or blind plugs.

2. Plug in the power cable and/or the signal cable.

3. Slide the cover onto the actuator.

   The torque of the cover screw is approx. 3.5 ± 0.2 Nm

   TORX 25IP
Electrical installation

- To ensure maximum self-locking ability, please be sure that the motor is shorted when stopped. Actuators with integrated controller provide this feature, as long as the actuator is powered.

- When using soft stop on a DC-motor, a short peak of higher voltage will be sent back towards the power supply. It is important when selecting the power supply that it does not turn off the output, when this backwards load dump occurs.

The power supply for actuators without integrated controller must be monitored externally and cut off in case of current overload.

### Actuator with IC

#### I/O specifications:

<table>
<thead>
<tr>
<th>Input/Output</th>
<th>Specification</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Violet</td>
<td>Analogue feedback: Configure any high/low combination between 0-10V or 0.5-4.5V</td>
<td>Tolerances +/- 0.5V Max. current output: 1mA Ripple max. 200mV Transaction delay 100ms Linear feedback 0.5% It is recommendable to have the actuator to activate its limit switches on a regular basis, to ensure more precise positioning</td>
</tr>
<tr>
<td></td>
<td>0-10V (Option A) 0.5-4.5V (Option B)</td>
<td></td>
</tr>
<tr>
<td>Single Hall output (PNP)</td>
<td>Movement per Single Hall pulse: 3mm pitch = 0.38mm per pulse 5mm pitch = 0.63mm per pulse 9mm pitch = 1.13mm per pulse 12mm pitch = 1.5mm per pulse Frequency: Frequency is 30-125 Hz on Single Hall output depending on load and spindle. Overvoltage on the motor can result in shorter pulses.</td>
<td>Output voltage min. $V_{IN} - 2V$ Max. current output: 12mA Max. 680nF N.B. For more precise measurements, please contact LINAK A/S. Low frequency with a high load. Higher frequency with no load.</td>
</tr>
<tr>
<td>White</td>
<td>Ready</td>
<td>The signal is constantly high when the actuator is in ready mode. Failure modes: The signal goes low when: - The current cuts off - The temperature is out of range (high duty cycle protection)</td>
</tr>
</tbody>
</table>

⚠️ The high duty cycle protection is NOT to be used as a stop function, since this might damage the actuator!

Chapter 4

Specifications

Motor: Permanent magnet motor 12 or 24V *

Cable: Motor: 2 x 14 AWG PVC cable
       Control: 6 x 20 AWG PVC cable **

Housing: The housing is made of casted aluminium, coated for outdoor use and in harsh conditions

Spindle part: Outer tube: Powder coated steel
             Inner tube: Stainless steel AISI304/SS2333
             Acme spindle: Trapezoidal spindle with high efficiency

Temperature range: -25°C to +60°C
                  -13°F to +140°F
                  Full performance +5°C to +40°C

End play: 2 mm maximum

Weather protection: Rated IP66 for outdoor use. Furthermore, the actuator can be washed down with a high-pressure cleaner (IP69K)

Compatibility: The LA35 IC is compatible with SMPS-T160 (For combination possibilities, please see the User Manual for SMPS-T160)

Usage:

- Duty cycle at 6000N and 3mm pitch is max. 10%
- Noise level: 48 dB (A) measuring method DS/EN ISO 3743-1 actuator not loaded

** Safety device regarding functional failure: **

Safety nut
The LA35 has a built-in safety nut in push as an option. Actuators with safety nut in push can only function when used in push applications. The safety nut comes into operation should the main nut fail. Afterwards it is only possible to drive the actuator into the innermost position. Thereafter, the actuator will not function any more and must be sent for service

Mechanical endstop
LA35 is equipped with mechanical endstop

Actuator dimensions

TECHLINE® LA35:

Installation dimension

Stroke ≤<300 = 200 + stroke
Stroke >300 = 250 + stroke
Minimum Installation dimension = 300 mm
Speed and current curves - 12V motor

The values below are typical values and made with a stable power supply and an ambient temperature of 20°C.
Speed and current curves - 24V motor

The values below are typical values and made with a stable power supply and an ambient temperature of 20°C.
1. **Type: 3540A1+00200B21**  
   Describes the basic functionality of the product

2. **Prod. Date: YYYY.MM.DD**  
   Production date describes when the product has been produced. This date is the reference for warranty claims

3. **Max Load: Push 1000 N / Pull 1000 N IP66**  
   Describes the maximum load that the product can be exposed to in compression and tension. This line also contains a reference to the product’s IP protection degree

4. **Power Rate: 24VDC / Max. 3.1 Amp**  
   Input voltage for the product and maximum current consumption

5. **Duty Cycle: 10%, Max. 2 min. / 18 min.**  
   The duty cycle defines the maximum period during operation without interruption. After operation, a pause must be observed. It is important that the operator follows the instructions of the duty cycle; otherwise, a possible overload may result in reduced product life/errors

6. **W/O #1234567-0001**  
   The LINAK work order followed by a unique sequential identification number
## Key to symbols

The following symbols are used on the LA35 label:

### CABLE:
- 0 = No cable
- 1 = 1.5 m power cable (0367046-1500)
- 2 = 5 m power cable (0367046-5000)
- 3 = 0.2 m power cable with AMP connector (0367006)
- 4 = 1.5 m power and 1.5 signal (0367046-1500/0367049-1500)
- 5 = 5 m power and 5 m signal (0367046-5000+0367049-5000)
- 6 = 1.5 m Y-cable power and signal in one (0367020)
- 7 = 5 m power cable & data cable M 12x1 (Bus) **

### IP-DEGREE:
- 2 = IP66 Dynamic / IP69K Static
- 9 = Harsh environment housing + IP66/IP69K (Special article number only)

### MOTOR TYPE:
- A = 12VDC
- B = 24VDC

### STROKE LENGTH:
- XXX = mm
  - Acme spindle: 50, 150,...,600 mm

### FEEDBACK:
- 0 = Standard (No feedback)
- H = Hall signal (Magnet)
- A = Analog feedback 0-10V (Magnet)
- B = Analog feedback 0,5-4,5V (Magnet)
- D = Bus **

### PCB OPTIONS:
- 0 = None
- 1 = Potential free endstop signals

*IC options for LA35:*
- 2 = IC option
- A = Modbus ** (Special article number only)

### SAFETY OPTIONS:
- '+' = None
- 1 = Safety Nut
- 2 = Splines
- 3 = Splines with safety nut

### PISTON ROD EYE:
- X = Special
- 0 = Ø10,2 hole (for 10mm pin) with slot
- 1 = Ø10,2 hole with slot (for 10mm pin) - AISI 303
- 2 = Ø12,9 hole with slot (for 1/2" pin)
- 3 = Ball eye Ø10H7
- 4 = Ball eye Ø12H7

### BACK FIXTURE
- X = Special
- A = Stainless steel Ø10,2 (AISI 304)
- B = Stainless steel Ø10,2 (AISI 304) turned 90 degrees
- C = Stainless steel Ø12,9 (AISI 304)
- D = Stainless steel Ø12,9 (AISI 304) turned 90 degrees
- E = Ball eye Ø10H7
- F = Ball eye Ø10H7 turned 90 degrees
- G = Ball eye Ø12H7
- H = Ball eye Ø12H7 turned 90 degrees

### BRAKE:
- 0 = None
- 1 = Brake Push
- 2 = Brake pull

### SPINDLE TYPE:
- 1 = 3 mm
- 2 = 5 mm
- 3 = 9 mm
- 4 = 12 mm
- 7 = 6 mm

### ACTUATOR TYPE:
- 35 = LA35

Chapter 5

Maintenance

- The actuator must be cleaned at regular intervals to remove dust and dirt and inspected for mechanical damages or wear.
- Inspect attachment points, wires, piston rod, cabinet, and plug, as well as check that the actuator functions correctly.
- To ensure that the pregreased inner tube remains lubricated, the actuator must only be washed down when the piston rod is fully retracted.
- The actuator is a closed unit and therefore requires no internal maintenance.
- In order to maintain a proper performance of the spherical eyes and to increase the resistance against environmental wear, we strongly recommend that the spherical eyes (ball bearings) mounted on actuators from LINAK are greased with anticorrosive grease or similar.

Repair

Only an authorised LINAK® service centre should repair LINAK actuator systems. Systems to be repaired under warranty must be sent to an authorised LINAK service centre.
In order to avoid the risk of malfunction, all actuator repairs must only be carried out by an authorised LINAK Service shop or repairer, as special tools and parts must be used.
If a system is opened by unauthorised personnel there is a risk that it may malfunction at a later date.

Main groups of disposal

LINAK’s products may be disposed of, possibly by dividing them into different waste groups for recycling or combustion.

<table>
<thead>
<tr>
<th>Product</th>
<th>Metal scrap</th>
<th>Cable scrap</th>
<th>Electronic scrap</th>
<th>Plastic recycling or combustion</th>
</tr>
</thead>
<tbody>
<tr>
<td>LA35</td>
<td>X</td>
<td>X</td>
<td>X</td>
<td>X</td>
</tr>
</tbody>
</table>

We recommend that our product is disassembled as much as possible at the disposal and that you try to recycle it.
Warranty

There is an 18 months’ warranty on TECHLINE products against manufacturing faults calculated from the production date of the individual products (see label). LINAK’s warranty is only valid in so far as the equipment has been used and maintained correctly and has not been tampered with. Furthermore, the actuator must not be exposed to violent treatment. In the event of this, the warranty will be ineffective/invalid. For further details, please see standard terms of sale and delivery for LINAK A/S.

Note:
Only an authorised LINAK® service centre should repair LINAK actuator systems. Systems to be repaired under warranty must be sent to an authorised LINAK service centre.
In order to avoid the risk of malfunction, all actuator repairs must only be carried out by an authorised LINAK Service shop or repairer, as special tools and parts must be used.
If a system is opened by unauthorised personnel there is a risk that it may malfunction at a later date.

The actuator is not to be opened by unauthorised personnel. In case the actuator is opened, the warranty will be invalid.
DECLARATION OF CONFORMITY

LINAK A/S
Smedevænget 8
DK - 6430 Nordborg

Hereby declares that LINAK Actuator 35xxxxxxxxxxx2x

complies with the EMC Directive 2014/30/EU according to following harmonized standards:

EN 50121-3-2: 2015, EN 60204-31: 2013

complies with RoHS2 Directive 2011/65/EU according to the standard:
EN 50581:2012

Additional information:
The actuator does also comply with EMC requirements of:
The Machinery Directive 2006/42/EC
The Recreational Craft Directive 94/25/EC
The Vehicle EMC Directive 2004/104/EC
and the following standards:
DS/EN 13309:2001 (Construction machinery - Electromagnetic compatibility of machines with internal electrical
power supply),
DS/EN ISO 14982:1998 (Agricultural and forestry machines - Electromagnetic compatibility - Test methods and
acceptance criteria),
EN/ISO 13766:2006 (Earth-moving machinery - Electromagnetic compatibility)

Original declaration
DECLARATION OF INCORPORATION OF PARTLY COMPLETED MACHINERY

LINAK A/S
Smedevænget 8
DK - 6430 Nordborg

Herewith declares that LINAK TECHLINE ® products
as characterized by the following models and types:

Linear Actuators        LA12, LA14, LA22, LA23, LA25, LA30, LA35, LA36, LA37

comply with the following parts of the Machinery Directive 2006/42/EC, ANNEX I, Essential health and safety requirements relating to the design and construction of machinery:

1.5.1 Electricity supply

The relevant technical documentation is compiled in accordance with part B of Annex VII and that this documentation or part hereof will be transmitted by post or electronically to a reasoned request by the national authorities.

This partly completed machinery must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with the provisions of the Machinery Directive 2006/42/EC where appropriate.

Nordborg, 2014-10-20
